

minimally
INVASIVE

IN MORE WAYS THAN ONE.

TO YOUR SURGERY,

Imagine a bright future of quality surgical devices as minimally invasive to your patients as they are to your bottom line.

EntriPort™ Trocars – Innovative devices that provide access for minimally invasive surgical procedures. Since EntriPort Trocars are a fundamental technology for MIS, we believe our improvements will **benefit patient care**. By paying attention to the details of how you work, we have developed new designs to give you access to surgery that runs as seamlessly as possible.

[**EntriPort***bladed

[**EntriPort**non-bladed

Offset Dilating Tip: offers atraumatic sweeping blunt dissection.

Offset Optical Port: offers wide & clear viewing area to increase visualization.

Auto Alignment: precisely places the obturator in optimal alignment with the cannula.

Top & Bottom Seals: reliable top seal follows the movement of the shaft, minimizing loss of pneumo.

FULL LINE OF TROCARS

includes both non-bladed and bladed trocar options

and YOUR BOTTOM LINE.

is simple - make
ove patient outcomes
ized solutions that
cost.

EntriPort™ Trocars – Think of how many trocars you use - three to five during each minimally invasive surgery. Our comprehensive breadth of options helps your surgical team standardize and transition to EntriPort for every minimally invasive surgical specialty. We think about two things – how can **our devices improve surgical practice** in the operating room, and how can we provide financial solutions that help you achieve your goals.
